Google Scholar is a freely accessible web **search engine** that indexes the full text or metadata of scholarly literature across an array of publishing formats and disciplines. Released in beta in November 2004, the Google Scholar index includes most peer-reviewed online academic journals and books, conference papers, theses and dissertations, preprints, abstracts, technical reports, and other scholarly literature, including court opinions and patents. Google Scholar uses a web crawler, or web robot, to identify files for inclusion in the search results.

No.	Title	Authors	Journal	SJR	CiteScore	Published	Cited By
1	The relationship between spiritual experiences with hope to be alive and death anxiety in burned patients	  + 1 more	Journal of Isfahan Medical School 38(598), pp. 811-817	0.132 Q4	0.3 Q4	2021	0
